LXE FiberOptic Cable

Easy-to-Install, Compact Cable Protects Your Network in Outside Plant Environments

The Reliable Cable Solution for Reliable Network Performance

When reliability counts, you can count on LXE Fiber Optic Cable. The LXE family of products is designed for the loop distribution market, where express entry (accessing fiber in the middle of a cable span) is a common practice. These cables provide excellent optical, mechanical, and environmental performance in compact, reliable designs.

Rugged, Robust Design for Optimal Performance in Outside Plant (OSP) Applications

The LXE sheath system achieves a 600-pound (2670 N) tensile rating through the use of linearly applied strength members placed 180 degrees opposite each other. The cable jacket is made of High Density Polyethylene (HDPE) to provide faster installation (through a lower coefficient of friction) and optimum cable core protection in hostile environments. The small size and light weight make installation easy. In addition, the LXE sheath system passes both the Telecommunications Industry Association/Electronic Industries Association (TIA/EIA) standard cable tests and the more stringent Lucent Technologies test program.
**LXE Fiber Optic Cable Features at a Glance**

- Lucent Technologies Single-Mode, Multimode, AllWave™ and TrueWave® fibers with D-LUX® Coating
- Compact size
- Rugged, robust design
- Variety of sheath and core options
- All fibers in central core tube
- Ideally suited to mass splicing techniques
- High density polyethylene sheath
- High strength to weight ratio

**LXE Fiber Optic Cable Benefits to the Customer**

- Reliable network performance
- Excellent optical, mechanical, and environmental performance
- Improved craft productivity (installation and splicing)
- Simplified fiber administration
- Maximum transmission capacity in a compact design
- Protection from environmental hazards and installation abuse

---

**Flexible Design Options for Variety of Customer Needs**

The cables are available in both metallic and dielectric sheath options. A Rural Utilities Services (RUS) listed version of the sheaths is also available. Design flexibility is also offered with the cable core options. The LXE family of cables is available with an AccuRibbon® core containing up to 216 single-mode fibers or a Lightpack® core with up to 96 single-mode or multimode fibers.

**Design Flexibility — Two Core Options**

The LXE sheaths are available with a Lightpack or AccuRibbon core.

The Lightpack cable core is a bundle of 4 to 12 fibers held together loosely with two helically applied binders. The core consists of an extruded plastic tube, containing filling compound and up to eight fiber bundles (up to 96 fibers). Positive identification of each fiber is provided by color coding both the fibers and the binders.

The AccuRibbon cable core consists of ribbons of 12 fibers bonded by a UV light-curable matrix material. Up to eighteen ribbons can be contained in the extruded plastic core tube for a total of 216 fibers. Positive identification of each fiber is provided by color coding the fibers within each uniquely identified ribbon.
Easy Fiber, Bundle, and Ribbon Identification

All fibers used in Lightpack bundles and AccuRibbon units are color coded to facilitate individual fiber identification. The individual fiber colors are given in the following table.

<table>
<thead>
<tr>
<th>Fiber No.</th>
<th>Fiber Color</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Blue (BL)</td>
</tr>
<tr>
<td>2</td>
<td>Orange (OR)</td>
</tr>
<tr>
<td>3</td>
<td>Green (GR)</td>
</tr>
<tr>
<td>4</td>
<td>Brown (BR)</td>
</tr>
<tr>
<td>5</td>
<td>Slate (SL)</td>
</tr>
<tr>
<td>6</td>
<td>White (WH)</td>
</tr>
<tr>
<td>7</td>
<td>Red (RD)</td>
</tr>
<tr>
<td>8</td>
<td>Black (BK)</td>
</tr>
<tr>
<td>9</td>
<td>Yellow (YL)</td>
</tr>
<tr>
<td>10</td>
<td>Violet (VI)</td>
</tr>
<tr>
<td>11</td>
<td>Rose (RS)</td>
</tr>
<tr>
<td>12</td>
<td>Aqua (AQ)</td>
</tr>
</tbody>
</table>

Each bundle of up to 12 fibers in a Lightpack cable can be uniquely identified through the use of a single color code for the binder. The binder colors follow the same sequence as the fiber colors. For example, in a 96-fiber cable, the first bundle of fibers is bound by a Blue (BL) binder, and the eighth bundle of fibers is bound by a Black (BK) binder.

Each AccuRibbon unit has identifying marks at approximately 150 mm (6 inch) intervals along its length. These marks uniquely identify each AccuRibbon unit within a cable. For a standard 12-fiber ribbon, the marking consists of four character sets separated by dashes as shown to the right.

Three Sheath Options Provide Protection from Environmental Hazards

Three sheath options are available: Metallic (LXE-ME), Dielectric (LXE-DE), and Rodent-Lightning (LXE-RL).

The construction of the LXE-ME sheath is shown below. An overlapped armor layer of 0.15 mm (0.006 in) thick corrugated electrolytic chrome coated steel (ECCS) envelops the core tube and has a ripcord under it to ease its removal. The steel armor is coated to inhibit corrosion and to bond to the outer jacket. Two steel wire strength members run longitudinally along the armor, diametric to each other. A ripcord is located next to each steel wire for ease of sheath removal. The sheath is completed with a black high density polyethylene (HDPE) jacket.

The construction of the LXE-RL sheath is the same as the LXE-ME sheath except the ECCS armor is replaced with an adhesive-coated 0.13 mm (0.005 in.) stainless steel (SS) armor which provides additional protection against rodents and lightning.

The LXE-DE sheath is also shown below. Two groups of glass strength members are longitudinally applied, diametrical to each other, over the cable core. Two rip cords, nestled along the strength members, are provided to facilitate sheath entry. The sheath is completed with a black high density polyethylene (HDPE) jacket.

For each sheath option, cable entry is extremely easy, even in mid-span. The cable core can be accessed with the strength members remaining intact, so cable tensile strength is maintained. In the metallic versions, electrical continuity is also maintained.

**Ordering Information**

Lucent Technologies LXE cables can be custom ordered in various lengths. The customer specifies a particular fiber optic cable design, fiber count, fiber type and transmission parameter by a 12-character cable code. To order, specify the cable code (described below) and the required cable length. Cable length, by default, is specified in feet. The general format and description of the code is as shown below:

### Fiber Type

<table>
<thead>
<tr>
<th>Fiber Type*</th>
<th>Metallic</th>

</tr>
</tbody>
</table>

### Notes

- **BXC = 0.35/0.25 dB/km at 1310/1550 nm**
- **BXD = 0.40/0.30 dB/km at 1310/1550 nm**
- **AllWave™ Fiber (BXC & BXD) ≤ .35 dB/km at 1385 nm**
- **HXM = 3.4 dB/km 200 MHz-km at 850 nm**
- **1.0 dB/km 500 MHz-km at 1300 nm**
- **N NN N = Number of Fibers**
- **004-096 (Lightpack)**
- **012-216 (AccuRibbon)**

---

* A 16-character code is required for RUS requested cable – simply add “RUS” to the above codes. Available fiber types are Single-Mode Matched Clad, Multimode, AllWave™, and TrueWave® fiber. Other fiber counts, other transmission characteristics and fiber type combinations are available on a special order basis.
LXE Fiber Optic Cable — The Reliable Solution for Fiber Optic Networks

With Lucent Technologies LXE Fiber Optic Cable, your worries about installation abuse and environmental hazards are a thing of the past. With two core options and three sheath options to choose from, you can select a cable configuration that is exactly right for your application. The compact design and high strength-to-weight ratio of the cable make installation easy — particularly in limited duct space. Craft productivity is also maximized by the easy access to all fibers provided by the central core tube design, and the benefits of mass fusion splicing of fiber ribbons. In addition to these improved fiber administration features, the LXE Fiber Optic Cable provides excellent optical, mechanical, and environmental performance. Count on Lucent Technologies for solutions that work.
